About The Workshop

Scientific paper writing

- ❑ Scientific papers are for sharing your own original research work with other scientists or for reviewing the research conducted by others. As such, they are critical to the evolution of modern science, in which the work of one scientist builds upon that of others.
- ❑ To reach their goal, papers must aim to inform, not impress. They must be highly readable — that is, clear, accurate, and concise. They are more likely to be cited by other scientists if they are helpful rather than cryptic or self-centred
- ❑ Scientific papers typically have two audiences: first, the referees, who help the journal editor decide whether a paper is suitable for publication; and second, the journal readers themselves, who may be more or less knowledgeable about the topic addressed in the paper.
- ❑ To be accepted by referees and cited by readers, papers must do more than simply present a chronological account of the research work. Rather, they must convince their audience that the research presented is important, valid, and relevant to other scientists in the same field.

Objective of the workshop

- ❑ Scientific writing is a necessary skill that must be learned by repetitive practice of reading, writing and revising
- ❑ Scientific writing can take many forms such as project report or dissertation or scientific article in an academic journal.
- ❑ This workshop is intended to impart researchers with basic skills in writing and publishing a scientific paper in a peer reviewed journal.
- ❑ workshop will help the participants to understand how to draft a scientific paper, become familiar to construct an argument in a scientific manuscript, do effective literature search and review, manage references using different software, understand authorship, plagiarism and ethics in publication.
- ❑ In addition, the course will provide participants an understanding of the submission process and peer review, selection of a journal and responding to reviewers comments.
